*A weathered appearance*  
*without the wait.*

*Cool Metallic Copper Penny<sup>1</sup>*

*Cool Metallic Silver<sup>1</sup>*

*Cool Metallic Champagne<sup>1</sup>*

### **Low Gloss Reflectivity**

The DuraTech®5000 colors have a low gloss reflectivity rating of 10-15% at 60°. <sup>1</sup> The metallic coatings known as DuraTech®*mx* have a gloss rating of 20-35% at 60°. ZACTique®II, ASC Building Products' proprietary weathered treatment has a low gloss rating of 10-15% at 60°.

Color swatches are for reference only. Limited by printing process and viewing conditions, color swatches on this piece are not necessarily accurate. Actual color samples are available upon request. Please contact your ASC Building Products representative.

<sup>1</sup> Metallic coatings are batch sensitive and are directional in nature. All flat surfaces can display waviness commonly referred to as "oil

canning." This is caused by steel mill tolerances, variations in the deck/purlin alignment and relative reflectivity of the material. Darker colors visually accentuate "oil canning" to a greater extent than the lighter, more neutral colors. "Oil canning is an inherent characteristic of flat steel products, not a defect, and therefore is not a cause for panel rejection. Contact an ASC representative for more information regarding "oil canning."
