## ASCBP's Nor-Clad® Panel Receives ICC Code Approval

Shown above, an ASCBP Nor-Clad® application.

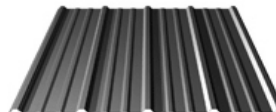

Sacramento, CA - ASC Building Products, A BlueScope Steel Company, has announced the International Code Council's release of ICC-ESR 2410, a report approving the use of ASCBP's popular Nor-Clad® panel. The newly-released report allows, contractors, architects, and designers to specify the popular, multi-use Nor-Clad® roof and wall panel knowing the ICC has backed ASCBP's testing results and performance data for Nor-Clad®.

"The issuing of ICC-ESR 2410 by the ICC complements the already strong line of metal roofing and wall panels offered by ASC Building Products," said Shannon Linker, ASC Building Products Vice President. "We feel this new report will give users of our Nor-Clad® profile even greater confidence

knowing ASCBP's in-house test results and data provided in the report are now backed by the brand and reputation of the International Code Council," added Linker.

The recently-released ICC-ESR 2410 references 2006 International Building Codes.

ICC-ES is the United States' leading source of technical information on building products and building technology for code compliance. A nonprofit, public-benefit corporation, ICC-ES performs technical evaluations of building products, components, methods and materials. The evaluation process culminates with the issuance of reports on compliance with the major U.S. building codes. The evaluation report can now be found online at [www.ascbp.com](http://www.ascbp.com).
