

IronOx *Corrugated*

DESIGNED TO RUST NATURALLY FOR AN ARTISTIC OXIDE FINISH

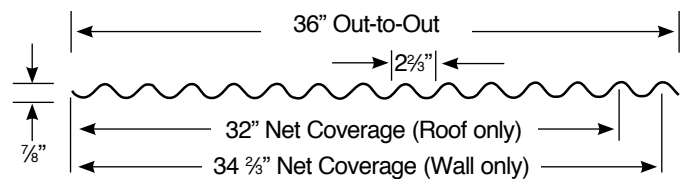

IronOx Corrugated is ideal for creative builders looking to design with the aesthetic beauty of rusted corrugated steel. Its historic corrugated form continues the old-fashioned design of steel roof and wall panels that have graced the countryside for decades.

- Heavy 22-gauge steel with 36" out-to-out width.
- Unpainted and untreated steel allows the surface to rust and form a natural iron oxide finish.
- Matching flatsheet offered in 46" width.
- Fastener option; plated/painted fasteners in Terra-Cotta color.

Recommendations and Cautions

- Performs best in environments with low humidity.
- Minimum roof slope 3:12.
- Not recommended near salt spray environments and frequent rain locations as it will shorten the life expectancy of the IronOx panel.
- Acid washing IronOx will degrade steel performance.
- IronOx Corrugated will continue to rust during the life of the panel.
- Rust runoff will likely stain the surrounding surfaces.
